

# Natural Resources Conservation Spring 2008 Seminar Series

Fridays from 12:20 to 1:10 in Holdsworth Hall, Room 305

- February 15** **Restoring Old-Growth Characteristics**  
Paul Catanzaro, University of Massachusetts
- February 22** **The Future Range of Variability: Synergistic Effects of Climate Change, Land Use and Invasive Species on Biodiversity Conservation**  
Brenda McComb, University of Massachusetts
- February 29** **Urban Regions: Ecology/Planning Boston Suburb, Barcelona Region, and Worldwide Patterns**  
Richard Forman, Harvard University
- March 7** **The Role of Sustainably Managed Forests and Wood Products in a Carbon-Constrained World**  
Cassie Phillips, Weyerhaeuser
- March 14** **Re-colonization of Southern New England by Moose: On-going and Proposed Research**  
Stephen DeStefano, U.S. Geological Survey
- March 28** **Connecting People with Nature...and Other Thoughts on the Transition to Sustainability**  
Alex Wilson, Environmental Building News
- April 4** **Hemlock Woolly Adelgid in New England: What Has This Pest *Really* Done to Our Forests?**  
David Orwig, Harvard Forest
- April 11** **Fish Passage Bioengineering and Research in the 21st Century: Old Problems - New Solutions?**  
Alex Haro, U.S. Geological Survey
- April 18** **Selection on and Evolution of Growth Trajectories in Fishes**  
Stephan Munch, Stony Brook University
- April 25** **From Bottom to Top: Altered Species Interactions in Urban Environments**  
Paige Warren, University of Massachusetts
- May 2** **Stemming the Extirpation of Northeastern Disturbance-dependent Birds**  
David King, U.S. Forest Service
- May 9** **To Bayes or Not to Bayes, That is the Question**  
Aaron Ellison, Harvard Forest
